EDUCATION

Vellore Institute of Technology

Bachelor of Technology - Computer Science and Engineering

October 2022 – May 2026

CGPA: 8.63

WORK EXPERIENCE

Machine Learning Intern, Suvidha Foundation

May 2025 – July 2025

- Engineered the design and implementation of custom pipeline integrating source analysis, **credibility filtering**, and **BERT-based summarization** models, which flagged over 500 unreliable news articles per day.
- Achieved a **+35%** improvement in trust score and reduced fake news content in summaries by over 50% through rigorous evaluation.
- Built a source analysis pipeline using **credibility analysis** and **BERT-based summarization** models, decreasing the average summarization processing time by **15%**, enabling faster content assessment.

Software Developer Intern, Deeporion Technology

October 2024 – December 2025

- Developed a real-time sentiment analysis engine (**AngularJS, Java, and MySQL**), processing 25k+ customer reviews daily; reduced feedback loop by **40%**.
- Improved **MongoDB** and **PostgreSQL** queries across 10+ apps, reducing retrieval time by 35 seconds using optimized indexing and joins.
- Collaborated with cross-functional teams to deliver backend services in an agile environment, demonstrating ownership and bias for action.

SKILLS AND EXPERTISE

Languages : Python, JAVA, HTML5, CSS3, JavaScript

Databases : MySQL, PostgreSQL, SQLite, Oracle DB, MongoDB

Tools and Technologies : Docker, Git/GitHub, CI/CD Pipelines

Frameworks and Library : Node.js, Express.js, TypeScript, React.js, RESTful APIs

CS Fundamentals : Data Structures, Algorithms, OOP, Operating Systems

ACADEMIC PROJECTS

Skill Navigator - Learning Platform [\[Live\]](#)

- Designed and managed **PostgreSQL** data models with Drizzle ORM, including migration-driven schema evolution for assessments, roadmap steps, and ML tracking.
- Developed progress analytics features to track completion status, time spent, and estimated learning timelines.
- Implemented secure authentication and authorization with **JWT/session-based** flows to protect user accounts and learning data.

Carbon NFT Marketplace

- Structured a full-stack **decentralized marketplace** where users earn blockchain-based NFT badges for purchasing eco-friendly products, integrating sustainability with Web3.
- Built and deployed **ERC-721 smart contracts** on the Polygon Testnet using Solidity and Hardhat, enabling secure NFT minting tied to carbon footprint reduction.
- Integrated Web3 deployment workflows for Polygon testnet environments, including automated deployment.

Crime-Dashboard – Crime Mapping and Analysis Platform for India

- Designed a web-based crime mapping platform for India using **geospatial data visualization** and interactive filters, leading to identification of 10 high-risk areas and informing resource allocation strategies for local law enforcement.
- Developed a data-driven platform to analyze crime hotspots, improving decision-making for public safety and resources.
- Enabled regional and type-based exploration with **3000+ user interactions**, demonstrated real-world public safety use cases.

CERTIFICATIONS

- Full Stack Development from Apna college | Coursera Frontend verified from John Hopkin's University
- GEN AI (IBM) | Java Developer Professional (OCP)

ACHIEVEMENTS

Smart India Hackathon

- Led a team of 4 in developing a prototype ranked in top 5 out of 200 submissions; contributed to backend and ML modules.

HackOnBlocks

- Directed a standout prototype ranked as one of the top 5 projects out of 150+ teams, demonstrating strong designs and execution.
